

Grapher 26 Version Info

Grapher 26.4.428 (July 27, 2026)

New Features and Improvements

- Numeric format control (rounding) for values in class plot legends

Fixes

- Between fill overflow with smooth line enabled
- Contour labels missing when populating templates
- Corrected class plot percent and count values when data is filtered
- Contour map colormap colors with logarithmic scaling
- Crash creating an XZ contour map
- Crash setting the base line on a surface map
- Crash undoing a duplicated object inside a group
- GPJ file open error: "Delete contains an incorrect path"
- Legend entry font when adding entries via Reorder/Select
- Pie slice coloring when populating templates with fewer slices

Grapher 26.3.394 (May 12, 2026)

Fixes

- Template settings and properties handling from older version files
- Corrected fit settings in template graphs
- Corrected worksheet cell references in template legends
- Corrected color scale text alignment when rotated
- Reset option available on any defaults set via the Defaults dialog

Grapher 26.2.377 (April 20, 2026)

New Features and Improvements

- Ability to save and reuse custom plot settings such as data limits, clipping values, and frequency during template population

- Adding or duplicating axes now link the axis to the same source as the original axis and honor positional customizations
- Ability to set the label value divisor to a negative number

Fixes

- Default font applies to all titles
- Axis limits automatically updating when plot data changes
- Fill direction with axes reversed
- Map coloring with axes reversed
- Text changes register need to save document
- Anchoring issue of titles on function plots
- Legend bounding box issues
- Disable data properties that can't be saved in template mode
- Class plot auto method selection
- Smooth performance while panning document
- Distribute items from different graphs
- Initial auto values for worksheet labels
- Better auto value for starting major ticks on axes
- Limit behavior when changing link axis to none
- Issues in converting to 3D graphs
- Undo issue with between fills
- Automation: Documents.Count number when loading templates with multiple pages

Grapher 26.1.314 (December 10, 2025)

New Features and Improvements

- New GRT (Grapher Template File) loading experience for populating template files with data using visual indicators and options
- Reimagined Graph Gallery to Template Gallery with many new examples that automatically launch as templates and allow saving to custom directory to access from the program
- Online Templates to visit Golden Gallery website to access a continuously growing database of specific use case templates and data to download
- Ability to add and save comments to any plot documents
- Grouped objects improved utility: indicator when editing, remove need for entering and exiting groups for editing, and use actions on grouped items directly such as alignment tools,

deleting, adding, etc.

- Updated GDAL import filters to current version
- Plot titles for fit curves
- Pan while moving labels
- Better column matching for plot labels
- Synchronize 'Data in rows' property among other settings
- Title property pages for axis objects
- Automation improvements:
 - AutoDocument | PopulateTemplate - Ability to specify all worksheets for loading template (GRT) files
 - New and updated scripts on the Automation tab
- New automation for scripting:
 - AutoGraph
 - BetweenFillCount
 - BetweenFillPlot1(index)
 - BetweenFillPlot2(index)
 - AutoBreakAxis
 - Count
 - AutoMagnifiers
 - AxisCount
 - AutoClipping
 - DataFilterCount
 - AutoFill
 - SetFill(srfFill)
 - AutoClassPlot, AutoXYZClassPlot, AutoTernaryClassPlot
 - GetClassName(index)
 - SetClassName(index)
 - GetClassMin(index)
 - SetClassMin(index)
 - GetClassMax(index)
 - SetClassMax(index)

Fixes

- Automation: Gradient not updated correctly at runtime

- Map Wizard feature available with no document
- Zoom view when opening documents
- Worksheet references not applied when populating old version template files
- Start up actions for welcome dialog saved in options
- Behavior when double clicking a document file to bring Grapher to foreground
- Data filter information in Property Manager
- Closing plot document pages prompts warning
- Snap to Ruler when using position controls
- Copy/paste format of title font format
- Document state when saving to network
- Rose chart property names and descriptions

Grapher 26.0.272 Beta3 (October 13, 2025)

New Features and Improvements

- Ability to add and save comments to plot documents (GPJ, GRF, GRT)
- Context menu redesign for usability and accessibility
- Pan while moving labels
- New plot label column matching
- Data in rows synchronization across other properties
- Title property pages for axis objects
- Template Gallery dialog scaling issues
- New automation for scripting:
 - AutoGraph
 - BetweenFillCount
 - BetweenFillPlot1(index)
 - BetweenFillPlot2(index)
 - AutoBreakAxis
 - Count
 - AutoMagnifiers
 - AxisCount
 - AutoClipping
 - DataFilterCount
 - AutoFill

- SetFill(srfFill)
- AutoClassPlot, AutoXYZClassPlot, AutoTernaryClassPlot
 - GetClassName(index)
 - SetClassName(index)
 - GetClassMin(index)
 - SetClassMin(index)
 - GetClassMax(index)
 - SetClassMax(index)

Fixes

- Multiple selection of items in separate graphs
- Behavior when double clicking a document file to bring Grapher to foreground
- Data filter information in Property Manager
- Closing plot document pages prompts warning
- Snap to Ruler when using position controls
- Template properties resetting to auto
- Copy/paste format of title font format
- Document state when saving to network
- Rose chart property names and descriptions
- Templates and sample files
- Bubble fill color variable opacity

Grapher 26.0.216 Beta2 (July 29, 2025)

New Features and Improvements

- Ability to add custom templates to the Template Gallery
- File version increment for template files (GRT). Note that GRT files created in this latest version will not load in previous versions
- Grouped objects improved utility: indicator when editing, remove need for entering and exiting groups for editing, and use actions on grouped items directly such as alignment tools, deleting, adding, etc.
- Moved commands for template actions to more intuitive locations for common workflow
- Installed and Online template adjustments and additions
- Allow selecting text data when populating templates
- Allow using row and sequence number for templates

- Plot titles for fit curves

Fixes

- Map Wizard feature available with no document
- Zoom view when opening documents
- Opening PNG files in Windows Photos triggers an error with Grapher libssl-3-x64.dll
- Error when populating data after removing column
- Crash using save all with modified internal worksheet document open
- Retain original axis settings on old version template files
- Worksheet references not applied when populating old version template files
- Start up actions for welcome dialog saved in options

Grapher 26.0.148 Beta1 (May 9, 2025)

New Features and Improvements

- New GRT (Grapher Template File) loading experience for populating template files with data using visual indicators and options
- Installed Templates and Golden Gallery Templates for a local and online databank of curated templates
- Template Ribbon contextual tab: includes commands to aid in populating templates (Auto Axis, Convert to Project, Add to Gallery)
- Expanded support: Graph Gallery converted to Installed Templates with more samples and automatic template conversion
- Expanded support: new and updated default user scripts
- Expanded support: legacy GRT files use new experience
- Automation: specify all files used in templates
- Updated GDAL import filters to current version

Fixes

- Automation: Gradient not updated correctly at runtime
- Templates: multiple data file can be selected for templates with multiple plots
