New Features

This is an overview of some of **Grapher's** new features.

User Friendly

- Edit pie chart slice properties directly in the **Property Manager**

Graph Features

- Add symbols to indicate axis breaks on the axis and plots
- Create math plots from exiting plots and mathematical functions (replaces summation plot)
- Fills between plots can show different properties between plot intersections
- Add fit curves to individual classes in class scatter plots
- Add fit curves where X is a function of Y

Worksheet Features

- Apply Transforms with relative cell references
- Added SIGN(X) function to return -1, 0, 1 for negative numbers, zero, and positive numbers respectively

Automation

- Specify complex text items with math text instructions
- Add symbols to indicate axis breaks on the axis and plots
- Create math plots from exiting plots and mathematical functions (replaces summation plot)
- Create a fit curve for an individual class in a class plot
- Add fit curves where X is a function of Y
- Set label frequency with a single line, InitLabels
