

Official version history and changelog information for Grapher 14.

Grapher 14.4.420 (24 July 2019)

- Fixed a crash when adding a new plot to a graph via the Property Manager
- Fixed a crash when writing an automatic script for crash reporting
- Fixed a crash when copy/pasting a ternary plot
- Fixed an Internal Error setting linked text axis title to "<<@"
- Fixed an Internal Error trying to load a GCT color table file
- Fixed an Internal Error when breaking an axis and updating axis break properties that required worksheet validation
- Fixed an Unexpected File Format error opening a Grapher 14 GRF file that contained a wind chart legend
- Fixed an issue where X/Y column assignments were not remembered after browsing to a new data file for a line/scatter plot
- Fixed an issue where not all classes in a classed piper plot were recognized until the plot was moved off the page
- Fixed an issue where the "Add to Graph" section in the Property Manager for a Q-Q Plot was empty
- Fixed an issue where it was not longer possible to add a fit curve to polar scatter plots and 3D step plots
- Fixed an issue where the position of axes set via automation depended on the command order
- Fixed an issue where symbol properties were not recorded when recording a script of creating a scatter plot or a line/scatter plot
- Fixed an issue where undoing changes to a class plot legend resulted in multiple legends being created
- Fixed an issue where a graph no longer displayed after opening an old file with incorrect equation formatting for a function plot
- Fixed an issue where the bounding box for a 3D fit curve was locked to the center of the page
- Fixed an issue where extra axes ticks were present off the end of the axis for a 3D step plot
- Fixed an issue where the page background did not appear when using a gradient fill if the Pattern was not changed from None
- Added the ability to remember the data sheet name in a GPJ file

Grapher 14.3.383 (8 May 2019)

- Fixed an issue where plotting from a multi-sheet XLSX workbook caused Grapher to freeze
- Fixed an issue where changing the number of digits for fit curve statistics recorded the line twice when Script Recorder was on
- Fixed an issue where saving back to a Grapher 6 file via automation resulted in empty plots
- Fixed an issue where exporting a rotated image to vector PDF caused artifacts

Grapher 14.2.371 (24 April 2019)

- Fixed a crash when aborting/canceling the loading of data for a GRF file
- Fixed a crash when pasting into a group
- Fixed a crash when loading data for a GRT template file
- Fixed a crash when running a script to a break mark then closing a fit report opened in the script with the script still paused
- Fixed a crash when saving, after a "No Error Occurred" message appeared
- Fixed a crash in licensing files when closing Grapher caused by a bug in third party Sentinel code
- Fixed a crash in a message box caused by a bug in third party BCG code
- Fixed an internal error when setting the explosion factor for a pie chart slice to a negative number
- Fixed a "Vector subscript out of range" error changing an Exponential histogram fit curve to a Power fit curve
- Fixed an issue where it was no longer possible to add a fit curve to an XYZ scatter plot
- Fixed an issue where height/width values in a script were always recognized as inches even if page units were set to centimeters
- Fixed an issue where the Edit Classes dialog for class scatter plots showed symbol sizes in inches even if the page units were set to centimeters
- Fixed an issue where the Grapher application sometimes stayed open in the background after closing, so files were appearing as locked for use
- Fixed an issue where points imported in a DGN file came in with incorrect sizes and colors
- Fixed an issue where plots renamed to their default names after reloading data
- Fixed an issue with inconsistent default directories appearing in the Save As dialog when saving multiple open projects
- Fixed an issue where the Scale setting for a lognormal histogram fit curve was incorrect
- Fixed an issue where plotting some row data caused the plot not to appear

- Fixed an issue where XYZ plots disappear yet have large bounding boxes when saved back to Grapher 12/Grapher 13 file formats
- Fixed a redraw issue where the Y axis for a stiff plot did not completely disappear when unchecked
- Decreased the internal Width minimum value for the Limit label width axis label property
- Removed the Margin option from the context menu in the Text Editor (it is still available from the Property Manager)

Grapher 14.1.346 (25 March 2019)

- Fixed a crash that resulted from antivirus software removing update files during installation on a computer that had not previously had Grapher installed on it
- Fixed a crash when a Symmetric LOESS fit curve fails to solve for a small data set
- Fixed an issue where <<filename>> linked text added to multiple pages in a project was not appearing correctly on all pages when project was closed and reopened
- Fixed an issue where clipping multiple plots at once was not working properly
- Fixed an issue where "Use worksheet for all plots" checkbox was missing from dialog when copy/pasting a graph from a template
- Fixed an issue where custom thousands separator in axis labels was not honored on German computer
- Fixed an issue where inaccurate export was generated when using graph coordinates in export
- Fixed an issue where **Home | Add to Graph | Axis** was enabled for drawn objects
- Fixed an issue where axis and plot became out-of-sync when axis contained a break
- Fixed a typo in the help documentation that indicated Weight Average fit curves can have a maximum Window width of 1001 (actual value is 49)
- Added Graph property for the ability to resize piper/durov plots

Grapher 14.0.334 (12 March 2019)

- Grapher 14 released.
