

Official version history and changelog information for Grapher, currently version 24.

Grapher 24.4.270 (February 14, 2025)

Fixes

- Plot Fill: Plot fill options extend beyond range of data

Grapher 24.3.265 (February 4, 2025)

Improvements

- An update was made to the message notification system

Fixes

- Axis Labels: Coincident major and minor tick labels did not copy/paste format
- Internal error after loading ECW files
- Internal Error when adjusting X-axis scale in a linked axis with Break Axis properties enabled
- Plot Fill: Plot fill extending beyond Cutoff value set

Grapher 24.2.247 (December 14, 2024)

New Features and Improvements

- Export selected object error when nothing is selected is more descriptive
- Change the in-app message icon to a bell

Fixes

- Axis: worksheet grid line: ternary and 3D don't update with plot and variable col isn't remembered
- Changing order of axis position changes object settings and can't undo
- Crash after undo legend creation and then save
- Crash creating a color scale legend from surface map
- Crash moving box plot axis labels
- Graph Title offset is not saved
- Grapher hangs when saving a plot with text filters

- Import PDF error when importing both raster and vector graphics, using the alternate rasterizer
- Internal Error adding a custom fit
- Internal Error dragging box plot into other graph
- Internal Error opening cloud drive file
- Internal Error when loading a ECW file
- Internal Error when opening DAT file
- Internal Error when opening XLS file
- Internal Error when using grid TIFF to create color relief layer
- Lock Position: is locking all objects in the document
- Polar Wind Chart: Add to Graph | New plot does nothing
- UI : Crop doesn't have a tooltip
- Worksheet grid lines: variable selector goes in correct order

Grapher 24.1.213 (October 1, 2024)

New Features and Improvements

- Axis Labels: Allow for a coincident major and minor tick label
- Category Bar Chart: when creating the plot, the second column of valid data is used instead of the first column
- Category Bar Chart: Auto-Enable 'Data in Rows' for Axis Labels When this Checkbox is Enabled for the Plot
- Data in Rows: automatically update labels from worksheet when same property changes on plot
- Function Plot: Use X axis limits as First/Last value for $X=F(Y)$ plots
- Histogram/ Rose/ Wind: Custom bins no longer require all bins to be manually defined
- Improve the Custom Bins dialog
- Updated sample file: Pie Chart.gpj

Fixes

- ECW files from UK government for year 2020 not recognized
- Line plot: Axis and data clipping limits causing plot to disappear
- Opening Grapher shows a WinWrap warning
- PDFv export: Use application page size (if applicable) not saving some plots
