

## Grapher 25 Version Info

### Grapher 25.3.315 (October 11, 2025)

#### *Fixes*

- Issues with linked plot titles anchored on line not being saved
- Crash dragging in new style Grapher template files
- Issues with 1-point vector plot angle axis clipping. Note this will affect the way existing projects look when opened in the current version if they included 1-point vector plots with clipping.
- Crash pasting data in worksheet
- Error with copying rose charts to other graphs
- Crash enabling coincident labels on angle axes
- Error with undo after importing image to empty group
- Legend boundary issues
- Recorded automation for flipping axis ticks and labels

### Grapher 25.2.292 (July 29, 2025)

#### *New Features and Improvements*

- Additional pages for documents use same layout as previous page
- Improved properties and functionality of automatic and custom bins
- Apply prefix and postfix font properties to multiple objects at once

#### *Fixes*

- Median calculation for first and third quartiles for box plots. Note this will affect how existing projects with box plots look when opening since the corrected calculation will be done when loading the document.
- Worksheet references lost in text objects
- Error bars retained when converting between plot types
- Crash setting Defaults for line style with no document open
- Creating ternary plots from worksheet view
- Automation error when using files that can't be found
- Automation for grouped box plot minor labels

- Crashes when starting up and shutting down
- Crash using linked object name on multiple graphs
- Legend sample text draw order
- Undo and redo issues with wind chart
- Clipping limits for polar bar charts when changing data
- Automation with converting between 2D and 3D types
- Linked axis setting when repositioned after duplicating
- Between fill property updates
- Crash setting wind chart bar width to 0
- Rose chart property settings for auto and custom
- Edit classes dialog up and down buttons on first launch

## **Grapher 25.1.247 (May 7, 2025)**

### *New Features and Improvements*

- Scatter Plot Matrix: User scripts now produce the expected matrix output without errors.
- Summation Plot: Unreferenced plots are no longer stored in the summation-plot list, so only plots used in the math expression remain.

### *Fixes*

- Welcome Dialog: Fixed selection controls in the startup dialog so your previous choices no longer lock out other options.
- Grid-TIF Import: Resolved the error where the filter failed to detect any grid data in TIF files.
- Welcome Dialog: Restored the dialog's display when a script file type was chosen previously.
- Crash when large raster image was imported.
- Axes: Corrected inconsistent major-label frequency when the axis direction is reversed.
- Removed the divide-by-zero warning that appeared when using changing some plot axes Minimum Limit to 0 from the property manager.
- Box Plot Axis: Fixed label formatting so that string abbreviation now works as intended.

## **Grapher 25.0.214 Beta3 (February 4, 2025)**

### *Improvements*

- 'Forget Server' button is now disabled in the License Information dialog while commuting a license.

## **Grapher 25.0.192 Beta2 (December 14, 2024)**

### *New Features and Improvements*

- Histograms: Automatic bins/ Reset bins should account for selected data limits
- Link properties | Add 'Use axis color for title' to line plots
- Object Manager: change "Bitmap" to "Image" object

### *Fixes*

- Saving as GPJ and copying graph creates additional worksheets

## **Grapher 25.0.156 Beta1 (October 1, 2024)**

### *New Features and Improvements*

- Bar chart: better default axis limits to display first bar in 'first position'
- Bar Chart: Charts disappear when base value is invalid for axis scale type
- Grid Lines: Change "Share grid lines" checkbox into another option in the "Parallel axis" dropdown
- Labels: Minor labels do not toggle back on after going through an axis type that does not support them
- Object Manager: Allow toggling the visibility for multiple objects at one time
- Options: Add new default option to link Object names to Titles

### *Fixes*

- Recorder: "Data in rows" property isn't recorded when adding plots
